

SAP INTEGRATION MODULE

EFFICIENT SAP INTEGRATION

powered by Cadaxo

THE TOOL

The SAP Integration Module is a specialized solution for seamlessly integrating dox42 document automation into SAP processes. Our tool offers an out-of-the-box connection that enables business departments to generate documents quickly, securely and in a controlled manner – completely without the need for their own ABAP programming.

Simple template management

- Easily manage the connection to your dox42 system and your dox42 templates in SAP Customizing. Define the possible output actions easily and clearly.

Seamless generation & processing

- One-click document creation in SAP (RFC- or REST-based).
- Out-of-the-box delivery via email (BCS), print, ArchiveLink, GOS, Application Server, and much more.
- Templates and guides for integration into various SAP modules and output technologies.

Comprehensive data integration

- Integration of data from SAP function modules, directly from tables and CDS views or from various external systems.

Zebra print integration

- Direct control of Zebra label printers (network or local) via PDF Direct + Print Action.

Logging, tracing & authorization

- Automatic logging of all actions, including timestamps and status.
- Role concept for document-level permissions.

Use cases & added value

Department without ABAP skills

Own form design in Word
instead of developer
project

Variety of document types

Letters, labels, Excel
reports, fact sheets and
certificates

High compliance requirements

Complete logs and user
rights management

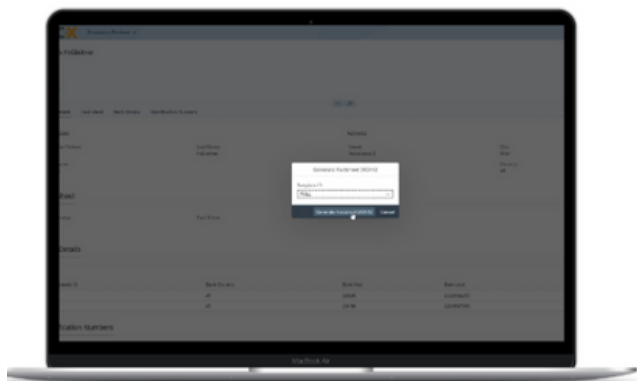

Cost-efficient label printing

Label design cheaper than
third-party tools

dox42

Successful integration directly into your SAP system:

- Order confirmations and delivery notes generated automatically
- Production orders with customizable reports
- Quality certificates and inspection reports directly from the module
- Maintenance logs and checklists created efficiently
- and much more

Cadaxo is an official SAP partner.
